

# EGFR (phospho-Y992) polyclonal antibody

Catalog: BCP00695 Host: Rabbit Reactivity: Human, Mouse, Rat

#### BackGround:

Epidermal growth factor mediates its effects on cell growth through its interaction with a cell surface glycoprotein designated the EGF receptor. Binding of EGF or TGFα to the EGF receptor activates tyrosine-specific protein kinase activity intrinsic to the EGF receptor. The carboxy-terminal tyrosine residues on EGFR, Tyr 1068 and Tyr 1173, are the major sites of autophosphorylation, which occurs as a result of EGF binding. Phosphorylation of Tyr 992, Tyr 1068 and Tyr 1086 is required for conformational change in the C-terminal tail of the EGF receptorgulates Actin filament accumulation at the plasma membrane and Cdc42 stimulates formation of filopodia.

## **Product:**

Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2

## **Molecular Weight:**

~ 175 kDa

## **Swiss-Prot:**

P00533

#### **Purification&Purity:**

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

#### **Applications:**

WB: 1:500~1:1000 IHC: 1:50~1:200 IF: 1:50~1:200

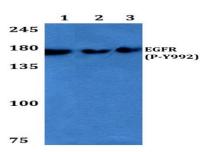

# Storage&Stability:

Store at  $4 \,\mathrm{C}$  short term. Aliquot and store at  $-20 \,\mathrm{C}$  long term. Avoid freeze-thaw cycles.

# **Specificity:**

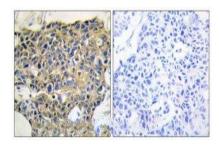

p-EGFR (Y992) polyclonal antibody detects endogenous levels of EGFR protein only when phosphorylated at Tyr992 (removal of the signal peptide).

#### **DATA:**

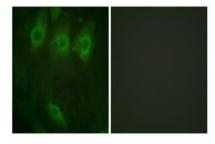

Western blot (WB) analysis of p-EGFR (Y992)) pAb at 1:500 dilution Lane1:HCC827 whole cell lysate(20ug)

Lane2:A549 whole cell lysate(40ug)

Immunohistochemistry analysis of paraffin-embedded human breast carcinoma, using p-EGFR (Y992) pAb. The picture on the right is treated with the synthesized peptide.

Immunofluorescence analysis of HeLa cells, using p-EGFR (Y992) pAb. The picture on the right is treated with the synthesized peptide.

#### Note:

For research use only, not for use in diagnostic procedure.
