

Matriptase (K21) polyclonal antibody

Catalog: BCP01066

Host: Rabbit

Reactivity: Human,Mouse,Rat

BackGround:

Matriptase (also known as MT-SP1, ST14, prostamin and epithin in mouse) is a tumor-associated type II trans-membrane serine protease that is highly expressed in many human cancer-derived cell lines and is implicated in extracellular matrix re-modeling, tumor growth, and metastasis. Matriptase performs pleiotropic functions in the development of the epidermis, hair follicles, and cellular immune system. Sphingosine 1-phosphate (S1P, SPP), present in serum-derived lipoproteins, activates matriptase while matriptase activates both urokinase-type plasminogen activator and hepatocyte growth factor (HGF). Hepatocyte growth factor activator inhibitor type 1 (HAI-1) is a Kunitz-type serine protease inhibitor identified as a strong inhibitor of matriptase and HGF.
