

# PEA-15 (D110) polyclonal antibody

Catalog: BCP01285 Host: Rabbit Reactivity: Human, Mouse, Rat

#### **BackGround:**

PEA-15 (phosphoprotein enriched in astrocytes) exists in an non-phosphorylated form (N), and two phosphorylated forms, Pa and Pb. PEA-15 is an endogenous substrate for PKC, which mediates the transition from Pa to Pb. The level of PEA-15 phosphorylation changes upon depolymerization or stabilization of tubulins, indicating that PEA-15 co-localizes with microtubules. The first 80 amino acids of PEA-15 correspond to the death effector domain (DED), which is a domain found in proteins that regulate apoptotic signaling pathways. The DED domain is necessary for PEA-15 to block Ras suppression. Although PEA-15 is predominantly expressed in the central nervous system, low levels of PEA-15 are expressed in liver and kidney, and higher levels in muscle.PEA-15 is also referred to as PED, phosphoprotein enriched in diabetes, for its elevated expression in type 2 diabetic patients

# **Product:**

Rabbit IgG, 1mg/ml in PBS with 0.02% sodium azide, 50% glycerol, pH7.2

### **Molecular Weight:**

~ 15 kDa

## **Swiss-Prot:**

Q15121

# **Purification&Purity:**

The antibody was affinity-purified from rabbit antiserum by affinity-chromatography using epitope-specific immunogen and the purity is > 95% (by SDS-PAGE).

# **Applications:**

WB: 1:500~1:1000

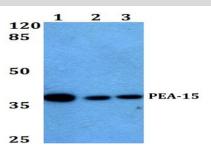

# **Storage&Stability:**

Store at  $4 \,^{\circ}$ C short term. Aliquot and store at  $-20 \,^{\circ}$ C long term. Avoid freeze-thaw cycles.

## **Specificity:**

PEA-15 (D110) polyclonal antibody detects endogenous levels of PEA-15 protein.

#### DATA:

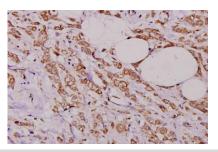

Western blot (WB) analysis of PEA15 pAb at 1:500 dilution

Lane1: The brain tissue lysate of mouse(40ug)

Lane2:C6 whole cell lysate(40ug)

Lane3:HEH293T whole cell lysate(40ug)

#### Note:

For research use only, not for use in diagnostic procedure.
